an activation member for energizing said motor for rotating said output;
a power source electrically coupled with said motor and said activation member; and

a leveling mechanism comprising a light emitting device coupled with said power tool housing, said light emitting device illuminating to indicate to a user that the power tool is in a horizontal or vertical position.

26. (NEW) The power tool according to Claim 25, said leveling mechanism further comprising:

a housing coupled within said power tool housing;

a cavity in said housing;

a rotating member in said housing, said rotating member moving in said cavity such that said rotating member seeks an equilibrium position which corresponds to a horizontal or vertical plane;

electrical contacts in contact with said rotating member, said electrical contacts only completing an electrical circuit when said rotating member is in said equilibrium position;

said light emitting device electrically coupled with said electrical contacts;

and

said power source coupled with said electrical contacts for illuminating said light emitting device when the circuit is complete.

Cont.

27. (NEW)The power tool according to Claim 26, wherein said rotating member being fixed for rotation about a center axis in a cylindrical cavity in said housing.

28. (NEW)The power tool according to Claim 27, wherein said rotating member includes a biased electrical contact.

29. (NEW)The power tool according to Claim 27, wherein said electrical contacts being a pair of annular members coupled with said housing, each said annular member including electrical contact portions spaced ninety (90°) degrees from one another about a circle such that as said rotating member reaches said equilibrium position, said rotating member biased electrical member contacts said annular rings electrical contact portions completing the circuit and activating said indicator.

30. (NEW)The power tool according to Claim 27, wherein rotating member being manufactured from an electrically conducting material.

31. (NEW)The power tool according to Claim 30, wherein said rotating member being cylindrical with at least one projecting member.

32. (NEW)The power tool according to Claim 31, said electrical contacts including a biased member for electrically contacting said at least one projecting member when said cylindrical rotating member is in said equilibrium position and an axle at the center axis of said rotating member completing the circuit.

33. (NEW)The power tool according to Claim 25, said cavity defined by a pair of opposing conductive conical members acting as said electrical contacts.

34. (NEW)The power tool according to Claim 33, said rotating member comprising a pair of conductive balls.

Al cont.
35. (NEW)The power tool according to Claim 34, said opposing conductive conical members separated by a non-conductive membrane.

36. (NEW)The power tool according to Claim 35, wherein said membrane includes apertures positioned 90°, about a circle, apart from one another.

37. (NEW)The power tool according to Claim 36, wherein said balls contacts one another through said apertures when said balls are in said equilibrium position completing the circuit and activating said indication.
